

Dillard College of Business Administration
Syllabus: Quantitative Methods
MGMT 4033
Summer I Semester 2020

Contact Information

Instructor: Dr. Mike Patterson, Professor of Management
Office: Dillard Building 203
Office hours: none
Office phone: (940) 397-4710
E-mail: mike.patterson@msutexas.edu

Course Materials

1. Levin, Rubin, Stinson and Gardner, Quantitative Methods, Primis Online, McGraw-Hill/Irwin, ISBN 0-390-56166-5. Required
2. Patterson, Management Science Programs for the IBM Personal Computer, 3rd ed., Kendall-Hunt Publishing, ISBN: 0-7872-6792-9. Required.

Course Description

Methods and application of operations research including topics such as linear programming, waiting line theory, PERT, networks, transportation, assignment, dynamic and goal programming.

Course Prerequisites

Junior or Senior standing or consent of Department Chair and BUAD 3033

Learning Goals

- I. General Learning Goals:
 - Understand the role of quantitative modeling in business and economics. Students will practice problem solving and decision-making skills during in-class discussion. Assessment will occur on both homework assignments and course examinations.

These general learning goals are among those established by the Dillard College of Business Administration. General learning goals represent the skills that graduates will carry with them into their careers. While assessing student performance in obtaining these general learning goals, the Dillard College is assessing its programs. The assessments assist us as we improve our curriculum and curriculum delivery.

II. **Course Specific Learning Goals:** Upon completion of the course students will have a basic knowledge of and understanding of the following database components, concepts and applications.

- Define and discuss the fundamentals of linear programming model formulation and interpretation.
- Explore the role of mathematical modeling in multi-objective programming, transportation, assignment and dynamic programming
- Understand the PERT and CPM approach to managing projects and other network models such as the minimal spanning tree and shortest path algorithm.
- Define and discuss the basic concepts involved with waiting line models.

Course Policies

Other Related Policies

If a student misses a regularly scheduled exam, the student must immediately notify the instructor of his/her intention to schedule a make-up exam. There is no other recourse available for a missed exam in the class. The exam dates are tentative and subject to change.

Grading and Evaluation:

Homework Problems - Each is a requirement of the class. You are required to complete 13 of the 18 assignments. Each homework assignment must be turned in on time. All homework is due in two weeks of the completion of lectures (one week for summer semester) related to the homework topics, with the exception of homework assigned at the end of the semester. Due dates for end-of-semester homework will be announced. A one-point deduction from the semester average will be calculated at the end of the semester for each missing or late homework assignment.

Grades will be determined on the basis of the total points earned on five 100-point exams and any missing or late homework assignments. A calculator may be allowed for the exams and quizzes. The calculator must be a regular hand-held calculator. No other electronic devices are allowed.

Letter grades will be given according to the following scale:

A 450 - 500 points

B 400-449 points

C 350-399 points

D 300-349 points

F Below 300 points

- The results of your exams and homework will be posted periodically on D2L
- It is the responsibility of the student to assure that homework is being received and proper credit is given.
- Semester grades will be reported through normal University channels with no exceptions.

Course Content and Outline:	NA	NA
Topic Outline:	Class Sessions (Hours)	Textbook
1 Linear Programming	7	Pages 1-75
Graphic Method	NA	NA
Technical Issues	NA	NA
Computer Applications	NA	NA
Simplex Method	NA	NA
Exam one (tentative date 06/04/2020)	NA	NA
Linear Programming	8	Pages 1-75
Maximization vs. Minimization	NA	NA
Problem Examples	NA	NA
Setting up for the Computer	NA	NA
Shadow Prices	NA	NA
Reduced Cost	NA	NA
Homework	NA	NA
Exam Two (tentative date 06/11/1020)	NA	NA
Goal Programming	6	Pages 189-213
Comparison to Linear Programming	NA	NA
Setting up computer solutions	NA	NA

Interpretations of output	NA	NA
Homework	NA	NA
Assignment Method	4	Pages 129-143
Basic Concepts	NA	NA
Homework	NA	NA
Exam Three (tentative date 06/18/1020)	NA	NA
Transportation Problem	4	Pages 91-129
Introduction	NA	NA
Interpreting Input/Output	NA	NA
Homework Assignments	NA	NA
Dynamic Programming	6	Pages 156-170
Shortest Route Problem	NA	NA
Basic Knapsack Problem	NA	NA
Applications	NA	NA
Homework	NA	NA
Exam Four (tentative date 06/25/1020)	NA	NA
Waiting Line Models	5	Pages 207-213
Descriptive Systems	NA	NA
Normative Systems	NA	NA
Simulation of Waiting Lines	NA	NA
Homework Assignments	NA	NA
Minimal Spanning Tree Model	2	Pages 156-170
Network Models	NA	Pages 156-170
PERT/CPM	333####333333333333	NA
Cost Considerations	NA	NA
Homework Assignments	NA	NA
Exam Five (tentative date 06/02/1020)	NA	NA

Academic Integrity:

With regard to academic honesty, students are referred to the "Student Honor Creed" of Midwestern State University Undergraduate Catalog.

Americans with Disabilities Act:

This class follows the guidelines suggested by Disabilities Support Services for those students who qualify for disability services. See Midwestern State University Undergraduate Catalog, Services for Students with Disabilities.

Syllabus Change Policy:

This syllabus is a guide for the course and is subject to change.

Additional Information:

Operations Homework Notes

Homework assignments for this class are located on the Dillard server drive Y. These files may be accessed in the Dillard computer labs on the first and third floors (146, 306, 324 and 335).

qmhomework.doc

Homework Documents

- You are provided with a set of blank documents for homework.
- These homework assignments are very similar to the types of problems which will be on the computer-based part of the comprehensive final examination.
- **If you lose your homework copies, these may be downloaded from D2L or the computer lab server on drive**
Y:\coursework\MikePatterson\homeworkdocuments\opshomeworkmaster.doc.
- **Homework assignments should be e-mailed to my graduate assistant at the following e-mail address: patterson.homework@msutexas.edu.**

Homework Assignments

(13 of the 18 are required to avoid grade deductions for the semester)

- 1 Handout - RediKleen Corp. Linear Programming
- 2 Problem 2, page 75
- 3 Problem 6, page 76
- 4 Problem 25, page 83
- 5 Crescent Products Inc.
- 6 Problem 25, page 203
- 7 Problem 6, page 149
- 8 Problem 22, page 151
- 9 Problem 11-11, page 147
- 10 Problem 11-10, page 147
- 11 Golfball Problem from Class
- 12 Training Program Problem from Class (Shortest Path)
- 13 Homework Queuing #1 Handout
- 14 Homework Queuing #2 Handout
- 15 Problem 27, page 164
- 16 Problem 38, page 168
- 17 Problem 7, page 157
- 18 Problem 9, page 159

Quantitative Methods	Homework Assignments	13 of 18 are required to avoid point deductions for semester
Number	Assignment	Best Payoff
1	Hand-out RediKleen Problem	2.72
2	Problem 2, page 75	5,538.XX
3	Problem 6, page 76-77	770
4	Problem 25, page 83-84	907.7
5	Crescent Products Inc. (Handout)	Ultras 3,500
6	Problem 25, page 203	Earning Goal met Ag. Loan 230
7	Problem 16, page 149	4,300
8	Problem 22, page 151	40
9	Problem 11, page 147	119,987.5
10	Problem 10, page 147	540
11	Golf ball Problem from Class	2,900
12	Training Program Problem from Class (Shortest Path)	30
13	Homework Queuing #1 Handout	Optimum # clerks = 2 Total Cost 2 clerks =25.44
14	Homework Queuing #2 Handout	Average Number on System Daily=11
15	Problem 27, page 164	1,125
16	Problem 38, page 168	22
17	Problem 7, page 157	37
18	Problem 9, page 158	42
