CITATIONS

[\[HTML\] A qualitative study on acceptability of the mistreatment of women during childbirth in Myanmar](#)

TM Maung, KL Show, NO Mon, Ö Tunçalp, NS Aye... - *Reproductive Health*, 2020
Improving the quality of maternal health care is critical to reduce mortality and improve women's experiences. Mistreatment during childbirth in health facilities can be an important barrier for women when considering facility-based childbirth

[\[HTML\] Providers' perceptions of disrespect and abuse during childbirth: a mixed-methods study in Kenya](#)

PA Afulani, AM Kelly, L Buback, J Asunka, L Kirumbi... - *Health Policy and Planning*, 2020
Disrespect and abuse during childbirth are violations of women's human rights and an indicator of poor-quality care. Disrespect and abuse during childbirth are widespread, yet data on providers' perspectives on the topic are limited. We ...

C Hornillos Brugat - 2020

Introducció: El dolor és un component divers en la seva manera de manifestació i interpretació sociocultural que depèn de diversos factors, fisiològics i psicològics. La percepció del dolor de part com a producte d'una necessitat de salut afavoriria l'acceptació d'aquest dolor. La salutogènesi associa aquesta necessitat per promoure la mínima intervenció al part, utilitzant analgèsia no farmacològica, així augmentant la sensació de control. Per altra banda, les mesures farmacològiques ...

[O Dahan - Current Psychology, 2021](#)

This paper focuses on the riddle of the extreme ends of the birth experience. On one end, are women who experience relatively successful childbirth as traumatic, and suffer from poor mental health during postpartum, varying from baby blues to postpartum depression and up to childbirth-related PP-PTSD. On the other, are women who experience childbirth as a highly positive, life-altering event. I offer that both extremes can be understood from the phenomenon of birthing consciousness ...

[Obstetrics at odds with evolution: The consequences of interrupting adaptive birthing consciousness](#)

O Dahan - New Ideas in Psychology, 2021

Abstract “Birthing consciousness” is a psycho-physical state of focus and retreat into which a woman sometimes enters during physiological birth. When this state is initiated and continues uninterrupted, the probability of a natural birthing process increases. Adversely, interruptions to the state of birthing consciousness slow down or even stop the birth from progressing. In this theoretical examination, I claim that birthing consciousness was a useful adaptation in human evolutionary time ...
